

WELCOME TO NEXTLOG!

Updates from the NEXTLOG project

On October 25th 2022, the **NEXTLOG** partners gathered physically for the project's latest meeting that was organized by [South-East European Research Centre \(SEERC\)](#), in Thessaloniki, Greece.

The partners discussed all the latest project updates and all the related upcoming tasks related to the finalization and delivery of the Digital Intelligent and Sustainable Logistics (DISL) content. Since the course material has been developed in English, all partners will be making the content available in the languages of the featured countries (Polish, Slovenian, and Greek). The consortium is also preparing suggestions as to how the course material will be implemented by each partner organization in the future.

The videos of the e-learning environment will also be developed by each partner. The partners have also discussed the remaining multiplier events that were scheduled for the month of November 2022.

On the 4th November the results of the **NEXTLOG** Project were presented in Poland, at the 2022 Responsible Supply Chains conference in Toruń Nicolaus Copernicus University by the partners in the [University of Lodz](https://www.uni.lodz.pl/).

The global logistics market is undergoing a transformation towards the use of digital, intelligent, and sustainable solutions. These conditions determine the direction of education for future university graduates. Over 50 academics who participated in the conference were informed about open access educational materials on sustainability in SCM, new technologies in SCM and intelligent transportation systems. Moreover, the most important skills of candidates for logistic positions expected by logistic companies were presented.

The interest to access these virtual learning environment materials was extremely high.
